Annual Catalog for 1936

D. S. DIBBLE, *President and Secretary*

HARWOOD MARTIN, *Vice-President and Treasurer*

DURING the last forty-five years, Dibble's Farm Seeds have established a record for themselves on thousands of American farms that is not excelled by those obtainable from any other American firm.

Over a hundred years ago, a good old English farmer founded a seed business based on one thing: "The best seeds and the best seeds only at a fair price." In the hundred years that have elapsed, that seed business has grown to be the biggest business of the kind in the United Kingdom. The staid, hard-working British farmers appreciated quality.

In 1891, Edward F. Dibble, a young farmer of the Genesee Valley country of western New York, without knowing that there was in existence such a firm as the English one mentioned, established a farm-seed business with a motto—"Farm Seeds and Farm Seeds only, one grade and that the best obtainable, at the lowest prices consistent with the highest possible quality." History repeats itself, and in forty-five years our business has developed into the largest strictly mail-order farm-seed business on the American continent. The good, honest, hard-working American business farmer also appreciates quality at a fair and just price. This Catalog is directed to the business farmer, the man who desires to live well, have the comforts of the age in which he lives, educate his children, travel if he wishes, and have a competence for his old age.

The best farm seeds obtainable are the first essential to successful, money-making farming. We furnish this quality only, and at as low a price (and frequently lower) than inferior seeds of unknown origin would cost you.

We **know** farm seeds. A lifetime has been devoted to the farm-seed business. We have over a thousand acres in the Dibble Seed Farms. We are seedgrowers and actually produce, on our own farms, a large part of the seeds we sell and "ship from our farms to yours." We try out new or so-called new varieties in field-culture, and when we recommend something, we **know** it is good. Members of our corporation travel thousands of miles annually inspecting seeds and seed-crops; our inspection is intelligent and thorough, as one of our officers is a graduate of Cornell, where for four years he specialized in plant-breeding, seed-testing, plant pathology, and the like.

We operate a seed-testing laboratory, where we test our farm seeds for purity, germination, etc., every test being made by one of our officials, and every bag has a tag attached showing the result of our test. We do not have to take someone's "say so" as to quality—we do our own testing and **WE KNOW**.

Prices are **net f.o.b.** shipping station. On page 22 you will find a map showing just how near we are to you. If you live within or just over the 300-mile circle, you certainly should be one of our customers. Bags and sacks free, as stated.

Terms, strictly cash with order, except on carload lots, when a special price will be made you, delivered to your station, payable on arrival and inspection of goods.

As prices constantly fluctuate throughout the season, we do not print prices in this Catalog but issue special Price-Lists giving the very lowest prices prevailing at the time. If you are not ready to order when this Catalog reaches you, advise us when you are and a new Price-List will be sent you.

Our Guarantee. Dibble's famous "money-back-if-you-want-it" guarantee, subject to any test you want to make within ten days after the seeds reach you, is as fair and square as any ever given by an American firm. And our special guarantee or warranty is printed on the respective pages describing our seeds, and our various seeds are sold subject to the guarantee so printed. We are perfectly reliable and responsible. We refer you to the State Bank of Honeoye Falls, N. Y., Lincoln Alliance Bank and Trust Co., Rochester, N. Y., Dun's or Bradstreet's Commercial Agencies, or to any of our thousands of satisfied customers, some of whom must be in your vicinity.

©C1A A 193685

EDWARD F. DIBBLE SEEDGROWER • Honeoye Falls, N. Y.

The Plain Truth About The 1936 Farm Seed Situation

All figures relating to the production of crops harvested in 1935 are taken, as far as possible, from the final Government Crop Report, issued December 18, 1935, by the U. S. Department of Agriculture.

A birds-eye view of the nation's crops shows about average yields on a rather light acreage.

ALFALFA. The production of Alfalfa seed is estimated at 822,900 bushels, which about equals that of 1934 and the 5-year (1928-32) average. However, the production in the northern states where our hardy seed originates is considerably below normal. This is especially true of the Grimm variety.

SWEET CLOVER. The production of Sweet Clover seed declined from 626,100 bushels in 1934 to 558,888 bushels in 1935, which is 37 per cent below the 5-year (1928-32) average production.

MEDIUM and MAMMOTH CLOVER. A production of about 750,000 bushels is estimated. This is the smallest crop harvested in many years, and is 35 per cent below the 5-year (1928-32) average. The severe drought of 1934 greatly decreased the acreage available for seed production in 1935.

ALSIKE CLOVER. A production of about 283,000 bushels is estimated. This is 32 per cent below the 5-year (1928-32) average of 417,000 bushels.

TIMOTHY. The Timothy seed production is estimated at 2,849,400 bushels. This is ten times greater than the very low production of 261,900 bushels harvested in 1934. This year's crop is 83 per cent above the 5-year (1928-32) average and is the largest crop harvested since 1927.

SEED BARLEY. The total Barley crop is estimated at 292,249,000 bushels. This is slightly above the 5-year (1928-32) average production of 282,841,000 bushels. Good seed Barley is not as plentiful in the East as the total crop might indicate, due to unfavorable weather during final stages of growth and during harvest.

SEED OATS. The total Oat crop is estimated at 1,195,435,000 bushels. This is about equal to the 5-year average. As a rule the Oat crop is running very light in weight, and quality poor. Good seed Oats are scarce and are selling considerably above the basic price of feeding Oats. We are fortunate in having a good supply of heavy Oats.

SEED CORN. The total Corn crop is estimated at 2,202,852,000 bushels. This is 60 per cent larger than the short crop of last year but is 14 per cent smaller than the 5-year (1928-32) average. Due to excessive moisture, lack of sunshine, and early freezes, much Corn in the principal Corn-producing states shows low germination. The outlook for good seed Corn in many sections of the country is not good and we are inclined to believe that high-germinating seed Corn may be scarce in the spring. Our own supply was grown where conditions were more favorable and at present we have an excellent stock on hand.

SEED POTATOES. The total Potato crop is estimated at 356,406,000 bushels. This compares with 385,421,000 bushels last year and a 5-year (1928-32) average of 363,367,000 bushels. A drought in Maine, floods and dry weather in New York and Pennsylvania, and sudden freezing weather in the Midwest have reduced the 1935 Potato crop. Late blight also reduced the crop in many sections. The crop in the three principal eastern late Potato states, Maine, New York, and Pennsylvania, is estimated at 82,662,000 bushels or 39,138,000 bushels less than last year and 10,018,000 bushels less than the 5-year (1928-32) average. The East is not burdened with Potatoes as it was a year ago. The supply of Certified seed in the East will be considerably less. New York state will have only about half as much as a year ago and Pennsylvania 60 per cent of a year ago. The Maine crop is smaller and, due to inferior type, is sorting heavy. The short crop in the East presents an entirely different marketing situation this year and prices should hold steady throughout the season.

Hay Mixtures and Emergency Hay Crops

for producing a

Maximum Crop of Hay on Average Good Soils

We are constantly being asked, "What shall we sow for a good hay crop?"

The following is what we use, and have used for 50 years on the Dibble Farms, and our hay crops have been uniformly satisfactory.

MIXTURE FOR HAY NO. 1

4 lbs. Medium Red Clover
4 lbs. Mammoth Red Clover
2 lbs. Alsike Clover
7 lbs. Timothy or Timothy-Alsike Mixture

17 lbs. per acre

If your land is sour, low, wet, and thin, add 4 pounds of Red-Top, more Alsike, and less Medium and Mammoth. Sow Alfalfa seed *alone*, either Northern-grown Grimm or Common, at the rate of 15 to 20 pounds per acre. To inoculate the soil it is good practice to sow 4 quarts of Common Alfalfa seed per acre with the mixtures recommended above. This addition of Alfalfa frequently makes a splendid mixed hay and we have known it to add at least a ton to the acre to the crop.

Seeding Hay Crops That Can Be Pastured for a Year or More Before Plowing

No. 2 on Alfalfa Soils

6 lbs. Timothy or Timothy-Alsike Mixture
6 lbs. Medium or Mammoth Clover
6 lbs. Alfalfa, Common or Grimm
1 lb. Wild White Clover or White Dutch

19 lbs. per acre

No. 3 on Normal Soils

8 lbs. Timothy or Timothy-Alsike Mixture
6 lbs. Medium or Mammoth Clover
4 lbs. Alsike Clover
1 lb. Wild White Clover or White Dutch

19 lbs. per acre

EMERGENCY HAY CROPS

Two bushels of Oats and one bushel of Canada Field Peas per acre, sown as early in the spring as possible, constitutes about the best catch hay crop eastern farmers can plant. Cut for hay when Oats are in early milk stage. Seedings may be put out with this mixture, thereby causing no upsetting of the rotation.

SWEET CLOVER, sown with Oats on well-limed land, may be tall enough to cut with Oats, improving its protein content, and may be cut or pastured later.

SOY BEANS make an emergency hay crop, having a feeding value similar to Alfalfa. Inoculate Soy Beans. Drill shallow, on a good seed-bed, after corn-planting time, when weather is warm. Sow 6 to 8 pecks per acre if drilled solid, or 2 to 4 pecks in close rows. Cut after pods form and before leaves start to fall.

SUDAN GRASS, drilled at the rate of 20 to 25 pounds per acre soon after corn-planting, makes considerable amount of hay. Cut when just headed out. It will sprout up and make pasture or a second crop of hay.

MILLETS are reliable producers and will make a crop in 60 to 80 days. Sow 50 pounds Golden or Hungarian Millet to the acre, or 20 pounds of Japanese, the latter in moist soil. Do not sow till weather is warm, and cut for hay just before the seed forms.

Sward of the Cornell Pasture Mixture

PERMANENT PASTURES

Most pastures are not supplying the amount of feed for farm live-stock that they should. This is due either to the lack of fertility or lack of the proper pasture plants.

Pastures should not be considered idle land and left to care for themselves. The up-to-date, successful farmer is giving more thought to his pastures and taking steps to improve them.

For more detailed information, send for circular entitled "Seeding Permanent Pastures."

SEED IN APRIL OR MAY, preferably without a nurse-crop

The Cornell Pasture Mixture for 1936

Kentucky Blue Grass	10 pounds
Canada Blue Grass	2 pounds
Rough-stalked Meadow Grass	1 pound
Timothy	6 pounds
True Perennial Rye Grass	5 pounds
Kent Wild White Clover	1 pound

Total for seeding an acre 25 pounds

For seeding **Permanent Pastures** we recommend the "Cornell Pasture Mixture," because:

1. It is composed of high-quality seed of the proper plants, including wild White Clover.
2. It may be seeded either on plowed or on harrowed land.
3. When properly grazed it will produce more high-protein feed to the acre than will other farm crops.

FOR PRICES SEE SPECIAL PRICE-LIST IN THIS CATALOG

DIBBLE'S Lawn Grass Mixtures

Seed the lawn in early spring or early fall. We list below three mixtures for various conditions:

Dibble's Red, White, and Blue Lawn Mixture

Contains only the highest grades of Red-Top, White Clover, and Kentucky Blue Grass, mixed in the proper proportions. This has proved to be the best Lawn Mixture for any locality where Kentucky Blue Grass thrives, regardless of fancy names or cost. Sow 5 pounds per 1000 square feet.

Dibble's Shady Lawn Mixture (For fertile, moist soils)

Rough-stalked Meadow Grass (*Poa trivialis*) is included in this Mixture, because it is the best grass for heavy, moist soil or in moist shade. Sow 5 pounds per 1000 square feet.

Dibble's Dry Soil Lawn Mixture (For dry soil, due to slope, sand or tree-roots)

New Zealand Chewing's Fescue is the base of this Mixture because it is the best grass for dry shade or sandy soils where other grasses fail. This Mixture will tolerate poor and acid soils and withstand drought. Sow 8 pounds per 1000 square feet. The first two Lawn Mixtures can be furnished without White Clover, if so desired, at the same price.

FOR PRICES SEE SPECIAL PRICE-LIST IN THIS CATALOG

A well-kept lawn is a joy to any home-owner and will actually increase the value of his property. Good lawns once established will last a lifetime.

Dibble's Lawn Grass Mixtures are superior in quality because they are composed of only those grasses found to be suitable for the best lawns in New York and adjoining states, and only the highest grade of these individual grasses is used.

DIBBLE'S Northern-Grown Alfalfa Seed 1935 CROP

D. B. Alfalfa, 99.50 per cent pure or better; the best obtainable. Average analysis of all our D. B. Brand Alfalfa Seed sold during the last ten years was above 99.70 per cent pure and dodder-free.

Dibble's Alfalfa Seed, grown in the cold northern states adjoining Canada, is absolutely hardy and produces perfect and permanent seedings when seed from other sources fails.

Alfalfa is the most wonderful and productive plant of the clover family. It will grow on any good corn or wheat land, or on any soil that will give a good catch of clover. Once established, it is very hardy, sinking its roots deeply after moisture and nourishment, and the severest drought or coldest weather will not kill it.

Grows about 3 to 4 feet high, can be cut two or three times each season, and produces an average of four to five tons of hay to the acre. One ton of well-cured Alfalfa is worth practically the same as a ton of wheat-bran. Combined with corn fodder or ensilage, it makes an ideal feed for milch cows or steers, and horses thrive on it when fed intelligently with a proper grain ration.

If you are contemplating growing Alfalfa, our Alfalfa book tells you just how to grow it, and we can furnish you the same varieties we have found successful on our own farms.

A field well set to Alfalfa will last from ten to twenty years.

We sell Alfalfa subject to your test, the test of your State Experiment Station, or that of the United States Department of Agriculture. Keep your seed ten days, and if you are not convinced that it is as good as we say, return it at once; we will refund your money and pay the freight both ways.

We use all reasonable care in packing and sending out our Alfalfa Seed, but, as so many circumstances may arise after it leaves our possession, over which we have no control, we therefore do not guarantee, nor will we be responsible for the crop.

Samples and Special Price-List Free

DIBBLE'S SEED FARMS

Headquarters for Alfalfa Seed

Every bushel is northern-grown, hardy, acclimated, and the only kind to use on northern farms to insure success, the kind we used on our own farms to produce what has been called by farm experts "the best 100 acres of Alfalfa this side of the Rocky Mountains."

The supply of Alfalfa seed from the Far North will not be a large crop this year. Hardy northern seed always commanded a premium and should not be compared to cheaper seed of southern origin. Insist on DIBBLE'S D. B. BRAND. A good stand of Alfalfa on a field will more than double its value. What D. B. Alfalfa Seed has done for others, it will do for you.

Grimm Alfalfa. This extremely hardy variety is to be recommended for use in the seeding of most alfalfa fields in New York and adjoining states. Experimental results generally justify its use.

Common Alfalfa. Our hardy strain of this variety may be used on the natural Alfalfa soils of the East where Common Alfalfa has previously been grown successfully and where it is planned to leave the Alfalfa down only two or three years.

BUY ALFALFA SEED from ALFALFA GROWERS

If you have never grown Alfalfa, or if you have tried it without satisfactory results, why not try again, and this time get your seed from growers who have made a success with it, and never a failure?

Our D. B. Brand Alfalfa Seed has been used for years by thousands of progressive farmers in the eastern states, by the New York Experiment Station at Geneva, on the college farms at Cornell, and, wherever sown, if on suitable soil and our cultural directions have been followed, we have yet to learn of a failure.

1935 CROP

D. B. Red Clover, 99.75 per cent pure

D. B. Timothy, 99.75 per cent pure

I wish to state that the Timothy seed I bought from you 5 or 6 years ago gave a good crop for 1933. There are no weeds or thistle in it. The first year it grew to a height of 4 feet and last year it was 3½ feet high.—GEORGE R. COLFAX, Wanaque, N. J.

We saved about \$80 by using Timothy-Alsike Mixture instead of using separate seeds and mixing them ourselves.—HENRY REEVES, Leesburg, N. J.

The Timothy seed was clean and free from weeds, of very fine germination, and I have a fine seeding in spite of the drought. I saved \$2 per bushel in buying from you.—IRVING N. HAYDEN, Middlebury, Vt.

The germination of your Clover seed was good and it was free from weeds. The seed was \$5 less per bushel.—FRED VAN VLEET & SONS, Lodi, N. Y.

I never purchased seed from you that was not O.K., and I always got as good a crop or better than my neighbors.—R. H. KENNEY, Henderson, N. Y., February 20, 1935.

No weeds or foul stuff in your Clover and Grass seed. If every farmer would buy your seeds, there would be no foul stuff in the country.—D. E. MOORE, Atwater, N. Y.

D. B. BRAND TIMOTHY and CLOVER SEED

"THE CREAM OF THE CROP"

99.50% Pure or Better

Every bushel American Northern-grown

As a young man, the writer had his first experience buying seed for his father's 900-acre farms. Going to the local merchant, he found good-looking seed in stock and was told it was "prime" or "strictly prime" seed, but as to its purity, freedom from weed seeds, and germination, the local merchant never knew.

Now conditions have changed; stringent state laws protect the buyer, and you can buy intelligently. You do not need to buy a million weed seeds in a bushel unless you wish to, and every farmer has enough weeds growing on his farm now.

The safest thing to do is to use our D. B. Brand, than which there is nothing better, and as we handle this seed in such large quantities, we can save you money. Compare quality and prices, and we will have your order; in fact, we have scores of letters from farmers who testify to the superior quality of D. B. Clover and Timothy, and who also saved from 50 cents to several dollars per bushel by buying from us. Read some of them here.

Notwithstanding the fact that our seeds are tested in our own laboratory, we sell our D. B. Brand Seeds subject to your test, the test of your State Experiment Station, or that of the United States Department of Agriculture.

Keep your seed ten days after arrival, test it as you wish, and if you are not convinced that it is as good as we say it is, return it at once; we will refund your money and pay the freight both ways. Samples free.

We use reasonable care in packing and sending out our Clover and Timothy Seed, but as so many circumstances may arise, after they leave our possession, over which we have no control, we therefore do not guarantee nor will we be responsible for the crop.

D. B. BRAND CLOVER and GRASS SEED

99.50 PER CENT PURE OR BETTER. THE BEST POSSIBLE QUALITY. EVERY BAG TESTED BY UNITED STATES GOVERNMENT METHODS AND TAGGED, SHOWING OUR PURITY AND GERMINATION TESTS.

We continue our well-known policy of handling just one grade of Seeds, and that the best money will buy; nothing else goes into our warehouses and nothing but the best can therefore go out to our customers.

Traveling men from the big recleaning plants of Chicago, Toledo, and other western cities tell us that we are the only firm demanding 99.50 per cent purity or better on all purchases.

The average analysis of D. B. Brand Clover and Grass Seeds that were analyzed the last few years at the New York Experiment Station, the different New England Stations and the Seed-testing Bureau at Washington was above 99.70 per cent purity. Part of the samples were drawn by the official inspectors, a few were sent direct by ourselves to prove our own tests, and over half of them were made for our customers from seed we had shipped them.

Sweet Clover

Biennial white Blossom is the commonest type of Sweet Clover, and the one which has come to the front so rapidly in recent years for forage, pasture, and soil-improvement. It will grow in almost any climate and on almost any type of soil, thriving on land too poor for Alfalfa or Red Clover.

Full stocks, choicest grades only, of Orchard Grass, Kentucky Blue Grass, Red-Top, Dwarf Essex Rape, Canada Field Peas, Winter Vetch, constantly on hand

1935 CROP

Medium Red Clover

The common Red Clover largely grown throughout the country. This Clover requires well-drained soils to make its best growth, and is especially suited to rich bottom-lands or soils that have been heavily fertilized. If cut early it is easily possible in a good season to get two or three cuttings.

Mammoth Red Clover

Compared with the Medium Red Clover, its flower, foliage, and stems are of darker color; it is later in maturing and of larger growth. When grown on rich bottom-lands or heavily fertilized soil, it makes a very rank growth and often is very coarse; hence the names Sapling Clover, Big Clover, or Pea-vine Clover. One of the best soiling crops. It is recommended for soils of ordinary or low productivity because here it will make a growth similar to Medium Clover on more fertile soils. A good stand of Mammoth Clover will last from 2 to 7 years, depending on conditions. Being 10 to 14 days later than Medium Clover, it will mature with Timothy.

Alsike Clover

The hardiest of all Clovers; perennial. On rich, moist soils it yields enormous crops. Its greatest value is for sowing with other Clovers and grasses and is especially suited to sowing with Timothy.

Timothy

The most valuable of all the grasses for hay, especially in the North. It is better adapted to clay than to sandy soils and is at its best on moist and fertile soils.

Natural Mixtures

THE BARGAIN OF THE GRASS SEED TRADE

A boon to farmers wanting high-grade
seeds at a money-saving price.
What they are, where they come from.

In some of the northwestern states, especially Minnesota, and in certain sections of northern Canada, Alsike and Timothy grow naturally together, ripen at the same time, are harvested and threshed, and as the seed grains of Alsike and Timothy are practically of the same size, the two varieties cannot be separated.

As Timothy is traded in on the big markets on the basis of purity, and as Alsike is not Timothy and is considered by the experts a foreign seed, we frequently are able to buy round lots of these fancy Mixtures containing 20 per cent or more of Alsike at only slightly higher prices than for the best Timothy, and as we pass these seeds on to you at our usual small margin of profit, you get the Alsike you need in your seeding Mixture at a little above the regular *Timothy Price*, and then by adding the required amount of our D. B. Medium and Mammoth Clovers, you have an ideal Mixture and save money on every acre you seed down.

This is briefly the story of the Natural Mixture. Now these Mixtures are good, bad, and indifferent, and no one should buy a Mixture of any kind without a positive guarantee from a responsible seller as to the purity and also the percentage of each variety of seed in the Mixture. We sell just one grade—the best—and give, on our guarantee tag attached to each bag, the purity, germination, and percentage of Alsike and Timothy in this particular Mixture. The quantity of the two principal seeds may vary in different lots, but in all cases you will find "less than $\frac{1}{2}$ of 1 per cent of weed seeds."

We are the largest handlers of this grade of seeds in America, shipping direct to the consumer, and can furnish it to you, we believe, for less money than you can purchase it from any other source.

NOD-O-GEN

Soil and crop experts agree that for best growth, and to put atmospheric nitrogen in the soil, it will pay all farmers to inoculate all legumes, even where they are at present successfully grown. The cost is trivial when compared with the profit it will bring you. Legumes are clovers, peas and beans, alfalfa, soy beans, vetches, and other plants that grow their seeds in a pod. Their roots are the home of bacteria that draw fertility-building nitrogen from the air and store it in swellings on the roots, called nodules. These nodules not only feed nitrogen to the crop they are on, but rot away in the ground and supply valuable nitrogen to the soil for future bumper crops of corn, wheat, oats, beans, potatoes, etc.

Economical, Easy to Use

The 50-cent size will inoculate 60 pounds or less of seed, and the 30-cent size will inoculate 30 pounds or less of seed. It is a very simple and easy matter to mix the Nod-O-Gen with the seed, and will take but a few minutes of your time. Complete directions are printed on each bottle.

This is infinitely easier, safer and better than the old laborious soil-transfer method.

When ordering be sure to specify the kind of seed you wish to inoculate.

We recommend that you use Nod-O-Gen. All prices postpaid. See special price-list.

At Harvest-time

DIBBLE'S Heavyweight Oats

The Heaviest American Oat Grown

While in search of new varieties of Oats of value in the Northwest, where the best Oats are grown, we found, in Wyoming, several fields of a new variety with tall, stiff straw standing shoulder high and the heaviest American Oat grown. When these fields were threshed, the yield was over 100 bushels per acre and the weight over 45 pounds per measured bushel of pure white, thin-hulled grain. We purchased the entire lot, and from this source secured our stock seed of this, in our opinion, the heaviest and most productive American Oat. This was some twenty years ago. During that time we have distributed over 600,000 bushels to our customers, and, wherever grown, it has given wonderful yields in comparison with other varieties grown alongside: Around 100 bushels to the acre in New Jersey; 117 bushels in New England; in New York, on large areas, 80, 82, 87, 89, 92, and up to 106 bushels, where the average yield is 30 bushels; and in Ohio, crops averaging "just twice" the yield of common Oats have been reported to us by our customers.

We were fortunate in having our Oats grown in a locality where weather conditions were favorable for growth and harvesting. Therefore we have an excellent quality to offer our customers. In many sections of the country unfavorable weather conditions caused small yields of very light Oats that are not fit for seed.

Dibble's Heavyweight Oats have made wonderful yields for a large number of our customers in many states. We read of remarkable records and big yields of Oats in the western states, under irrigation, but right here, in the East, Dibble's Heavyweight Oats have produced record-breaking crops. Average weight 40 lbs. per measured bushel.

Free Samples on Request

DIBBLE'S HEAVYWEIGHT OATS *are sold subject to the following guarantee*

We guarantee our Seed Oats thoroughly re-cleaned by the best mills known to the trade, and in first-class condition for sowing. Keep our Seed Oats ten days, test them, and if not entirely satisfactory in every way, return them at once and get your money back.

We use all reasonable care in packing and sending out our Seed Oats, but as so many circumstances may arise after they leave our possession, over which we have no control, we do not guarantee, nor will we be responsible for the crop grown from any of our seeds.

Owing to the extra-heavy weight of these Oats, not less than 3 bushels should be sown per acre. For prices, see special Price-List.

I am so well pleased with the quality of the Seed Oats, I am sending you an order for 10 more bushels.—L. B. CHAPPEE, Angelica, N. Y., April 16, 1934.

Kindly send me 40 bushels Heavyweight Seed Oats. I have had these Oats from you several times and they have always given satisfaction.—E. C. BUZZELL, Fryeburg, Maine, April 15, 1934.

I planted your Heavyweight Oats 2 years ago and had the best turn-out I ever had. It was great.—A. A. BARTELS, Wilmington, Del., February 27, 1935.

The Heavyweight Oats I had from you outyielded mine 3 to 1 last year. I have

bought Potatoes from you for 40 years and have always been pleased with results.—L. M. SULINBARGER, Howard, Pa.

Last spring I bought 15 bushels of Heavyweight Oats from you. We got 325 bushels from 5 acres. We lost a lot of Oats during the hailstorm but we got a fine crop, better than other farmers.—RICHARD C. FRIEND, Volant, Pa., February 14, 1935.

Last year I ordered 40 bushels of Heavyweight Seed Oats from you and was very well pleased with them, so am ordering all my grass seed from you this year.—GEORGE H. DAVIS, Le Raysville, Pa., April 16, 1935.

DIBBLE'S Twentieth Century OATS

Are early, extremely productive, with tall, stiff straw bearing long heads filled with good-weight, thin-hulled grain, this year's crop weighing from 38 to 40 pounds per measured bushel. These Oats originally came to us from northern Canada, being discovered by one of our men we had out looking for new varieties of grain. After growing them on our farms for a year or two, with good results, we introduced them to our trade, and they have given general satisfaction.

On our own farms, growing from 100 to 150 acres annually, they have given us a yield of over 60 bushels per acre for a ten-year average, which is over twice the average production of the United States for the same period. Several crops, on large fields, have yielded over 80 bushels per acre, and a neighbor, from a 4-acre field, threshed and delivered to our warehouse 440 bushels of re-cleaned grain.

Dibble's Twentieth Century Oats have had a direct sale to farmers, through our Catalog, of over 450,000 bushels since we introduced them twenty years ago, and they seem to be as popular and productive as ever.

The Oats I got from you last year were fine and I raised a good crop.—G. S. STANHOPE, Isle La Motte, Vt., March 6, 1935.

Outyielding Others

The Twentieth Century Oats were fine; they yielded just two bushels where other Oats yielded one in the same field.—C. A. BOYD, Saegerstown, Pa.

The Twentieth Century Oats yielded 65 bushels to the acre, free from smut—about twice the yield of my neighbors.—ELMER G. DAVIS, Stone Ridge, N. Y.

An Ideal Oat-crop

DAIRYMEN, Read the Following Carefully

For a number of years many of our customers have been growing their concentrated grain-feeds on their own farms instead of buying patent feeds at high prices from the feed-dealers, and these dairy-farmers have made money year in and year out. From our experience, we recommend the two following Mixtures to sow per acre for best results:

Mixture No. 1

1 bushel Heavyweight or T. C. Oats
1 bushel Alpha Barley
1 bushel Canada Field Peas

Mixture No. 2

1 bushel Heavyweight or T. C. Oats
1 bushel Alpha Barley
1 bushel Marquis Spring Wheat

And quite a few farmers are using just Oats and Alpha Barley, sown together in equal quantities. All of the grains above mentioned may be sown early in the spring, ripen at the same time, and can be harvested without shelling. Letters from our customers report yields from these Mixtures of from 60 to 89 bushels per acre, average weight 50 pounds per bushel; or 1½ to over 2 tons per acre, of a highly concentrated grain-feed.

Analysis, as recently made by New York State Experiment Station, Geneva, N. Y., was as follows:

Oats, Barley and Canada Pea Mixture	Oats, Barley and Spring Wheat Mixture
Protein.....15.7	Protein.....11.9
Fat.....2.5	Fat.....2.9

Compare these analyses with those of the patent or open-formula feeds you are buying, and we are sure you will decide to grow your own High-Grade Dairy Feed hereafter. What else can you grow on your farm that will make you the same amount of money?

Heavyweight Oats

DIBBLE'S

Certified and Selected

SEED POTATOES

Northern-grown from selected certified stock seed, planted on soils especially adapted to each variety, producing a quality that for vigor, purity, and productiveness is unexcelled

For nearly a third of a century the sales of Dibble's Seed Potatoes have gradually increased until the annual sales reached and passed 100,000 bushels. We do not have a single salesman on the road, every order coming to us through the mail, and at least four-fifths of our business from old customers, thousands of whom plant Dibble's Seed Potatoes annually. This is the best tribute to the quality of our Seed Potatoes. Merit wins.

We grow on our own farms, and in this section, varieties of Potatoes adapted to our soils, and as to the earlies, we have them grown for us on contract in the virgin soils of regions still farther north, where these early types grow larger and better tubers than can be obtained on the old lands of the eastern states.

Seed Potatoes that are northern-grown, moved south only from 100 to 300 miles, frequently produce double the crop of home-grown seed, even of the same variety.

We can furnish State Certified Seed Potatoes, or Selected Seed Potatoes, grown from Certified seed.

SEED POTATO

GUARANTEE

We guarantee our Seed Potatoes northern-grown, carefully assorted for seed purposes, a strictly first-class sample U. S. Grade No. 1 as to size. While we exercise great care to have our Seed Potatoes pure and reliable, so many circumstances may arise over which we have no control that we do not give any warranty, express or implied, nor will we be responsible for the crops grown therefrom. Customers are to examine their Seed Potatoes immediately on arrival, as they are perishable goods, and, if not entirely satisfactory, advise us at once; otherwise it is mutually agreed between the buyer and seller that they are satisfactory.

We Are Headquarters for Seed Potatoes

We offer a few varieties, early, intermediate, and late, that have been proved "Best by Test." This list is approved by Dr. William Stuart, of the United States Department of Agriculture, whom we consider the greatest living authority on Potatoes. We have good crops of all varieties this year, both early and late, and can take care of your requirements, whether you need a bushel or a carload.

Early
OhioIrish
Cobbler

THE "BEST FOUR"

Early Varieties of Potatoes adapted to the Northern and Eastern States

As a result of competitive tests for a period of years on our own farms and on the farms of our growers, we have found that today there are just four varieties of early Potatoes that are worth growing in our territory.

Dibble's Spaulding Rose

A seedling of the old Early Rose, producing a much better yield of larger tubers. Skin is pink, with white flesh of good eating quality. A most desirable medium-early Potato for sandy loam soils.

Dibble's Early Ohio

For first early or extra early, either for the family garden or for market, there is nothing to compare with the Early Ohio. The Early Ohio is round to oblong in shape, pink skin, white flesh of most excellent quality and extra early. The pedigree stock Early Ohios we are offering this season were grown for us from North Dakota Certified Seed and are of splendid quality.

Dibble's Early Manistee

The Manistee is a seedling of the Early Rose, round to oblong in shape, slightly flattened, skin light pink, eyes near the surface, flesh pure white and table quality that is hard to beat. The Manistee gives best results on light, sandy soil.

The Manistee Potatoes yielded at the rate of 300 bushels per acre.—A. P. NOBLE, Gillett, Pa.

Dibble's Irish Cobbler

The Irish Cobbler is the best extra-early white Potato now grown. The tubers are uniformly smooth, round, plump, and handsome, creamy white, eyes strong and well developed. The flesh is white and of excellent quality.

The Cobbler is a week to ten days later than the Early Ohio, but usually much more productive, and the tubers are of good eating quality while the vines are still green. We recommend the Irish Cobbler as the "best" early Potato for all-round culture, either for the family garden or to grow on a large scale commercially. It is a good variety to tie to, as it, too, like Dibble's Russet, will give excellent results on any kind of soil. The fields from which we saved the stock seed which we offer our customers averaged from 325 to 625 bushels per measured acre. Our Cobblers this year are as choice a sample as we have ever owned and all grown from Prince Edward Island Certified Seed.

The Irish Cobblers yielded about 300 bushels per acre and much better than other varieties grown on the same farm.—EMILE KEGLER, Cochection, N. Y.

Rose

DIBBLE'S Russet Potatoes

YEARS ago, when we introduced this variety, we had only 1000 barrels to sell. The third year we sold over 11,000 barrels. Never before did a new variety make a name for itself so quickly.

Dibble's Russet is the best main-crop Potato for western New York, and is grown extensively in Michigan, Ohio, Pennsylvania, Maine, and other Potato-producing states. It outyields other sorts two to one, and crops of 300 to 400 bushels an acre are not uncommon. Customers write us that the "Russet gives splendid yields when other kinds fail." During the long drought of 1934 the Potato crop in many sections was almost a complete failure, yet under those hard conditions Dibble's Russet produced satisfactory crops—in fact, right here in western New York, where there was no rain for weeks, a yield of about 400 bushels an acre was reported.

Dibble's Russet Potatoes are round to oblong, of good size, with pure white flesh, russet skin, and few, shallow eyes. The quality is superb, and either baked or boiled is not excelled by any other variety. Dibble's Russet is enormously productive and has all the qualities that make for a profitable market Potato. The tubers are as large, or larger, than Rurals, Carman, or Raleigh, and where those sorts set only four or five tubers to a hill, the Russet produces eight, ten, or even twelve big tubers. The vines are strong and disease-resistant.

DIBBLE'S Russet Potato is the original round to oblong type of the Russet family. From its first introduction by us it has been bred absolutely true to type, and our stock seed is saved from fields entirely free from early or late blight, and where the vines were green and healthy until killed by frost. Our customers say that Dibble's Russet carries these inbred qualities to every locality where they are planted, and ninety-nine out of every hundred growers say Dibble's Russet is the best Potato grown.

DIBBLE'S
THE BEST
POTATO

DIBBLE'S

Russet Potatoes

Dibble's Russet is the Potato for you to grow on your farm. You will find it more profitable and far superior to any other variety for the main Potato crop. Whether you have "Potato-soil" or not, you will get a good yield if the soil is in good condition. Sand, gravel, loam, or clay will produce a satisfactory crop. Many customers say the vines are blight-proof, and spraying is not needed; neither do bugs like the foliage, for we have seen thousands of acres of Dibble's Russet where neither paris green nor arsenate of lead was used, and the vines were perfect.

If you say you "can't grow Potatoes," get a sack of Dibble's Russet this year. Give them a careful trial. We feel sure you will be satisfied, and next season you will be an enthusiastic booster for Dibble's Russet.

DIBBLE'S RUSSET POTATO, A FIELD ON OUR OWN FARMS

Notice the magnificent foliage in the above picture. We have found the Russet the most disease-resistant of any variety, and over a hundred of our customers have written us that Dibble's Russet was blight-proof while other varieties were blighted and died in the same or adjoining fields.

I have raised your Russets ever since you first put them on the market, and they have done better for me than any other Potato.—J. A. DODGE, Terra Alta, W. Va., April 3, 1934 (after 23 years).

The fifteen sacks of second-size Russets I bought of you last spring are my prize patch. They are 100 per cent better than cut seed.—PARKER BRISTOL, Schaghticoke, N. Y.

Last year we purchased your Russet and Cobbler seed, planting six acres, from which we dug 2500 bushels of Potatoes. The Russets produced the better yield.—THE KETCHIN TOBACCO CORPORATION, Tariffville, Conn.

From the 5 bushels of Russets I got last March I had 137 bushels of No. 1 Potatoes—and did not spray. Thanks!—HERBERT A. VAIL, Ulster, Pa., May 1, 1935.

I had some Russets from you two years ago and they yielded a good crop this year, despite the heavy drought we had.—EDWIN E. FERCHEN, Niagara Falls, N. Y., January 4, 1935.

It will probably interest you to know that my previous experience with your Russet Potatoes is responsible for my interest in your seeds. They are the World's Best Potatoes.—GEORGE HUDSON, Pine City, N. Y., January 21, 1935.

I sent to you for Seed Potatoes in 1934, and would like to say that I had the best crop of Potatoes that I ever raised. I had Dibble's Russets and am going to plant them again this year.—WILLIAM W. PEARRONS, R. 2, Orwell, Vt.

I am especially interested in your Russets. Have planted no other late variety for several years and find them very satisfactory.—D. E. SLONECKER, R. 1., Bellefontaine, Ohio.

DIBBLE'S Standard White Varieties for Main Crop

The first five varieties following are of the well-known Carman or smooth Rural family, the best-known type of market Potato now in cultivation

Rural New Yorker No. 2

The first of the late Mr. Carman's introductions that proved to be of great value. The Rural New Yorker No. 2 is a late variety, growing vines dark green in color, upright in habit of growth, with purple blossoms. The tubers are round to oblong, unusually large in size, white in color, eyes near the surface, and sets, as a rule, only two to four tubers per plant or hill, but usually all large ones.

Carman No. 3

Also originated by Mr. Carman and introduced by him several years later, as an improvement over the No. 2, which it resembles in every respect, except that it sets more heavily in the hill, averaging, with us, three to five tubers per hill and mostly merchantable.

Number 9

Very similar to Carman in every way, but a variety of later introduction. Very strong, rank grower.

Heavyweight

The latest of the smooth Rural type.

Stand Dry Weather

My Dibble's Russets and Carmans are looking fine in spite of the awfully dry weather.—EVEREL BEAN, Endeavor, Pa.

We had a phenomenal yield of 300 bushels to the acre. They were much better than any other fields on the same or adjoining farms and did not blight at any time during the period of growth.—D. H. McELROY, Monroe, N. Y.

The Green Mountains from you yielded about 300 bushels per acre. Good for this year.—M. L. WATSON, Ely, Vt.

Sir Walter Raleigh

The last of the Carman creations and introduced by Peter Henderson & Co. some thirty years ago. The Sir Walter Raleigh is similar to the other two but has, in our opinion, the most desirable quality of setting more tubers per hill and smaller in size, no large or overgrown tubers at all, but of desirable size and shape to command the top price in the best markets.

Dibble's Improved Green Mountain

In the Improved Green Mountain we have a better Potato than was the old Green Mountain at its best, a score of years ago. The tubers are uniform in shape, oblong, with two good ends, slightly flattened, creamy white skin absolutely free from disease in any form, and with pure white flesh of excellent quality. They are particularly well adapted to northern latitudes where the rainfall is abundant and the temperature is not excessively high. As a rule, they do not succeed as well in localities where they are subjected to unfavorable conditions of growth during the time they are forming tubers, as do the members of the Rural group.

able conditions of growth during the time they are forming tubers, as do the members of the Rural group.

Dibble's Improved Green Mountain

I bought 5 bushels of your Certified Carman Seed Potatoes last spring. These were planted and raised under ordinary field conditions, and in spite of a very dry summer we dug 98 bushels from them. These Potatoes are practically all marketable size. The yield was at the rate of a little over 460 bushels per acre.—LESLIE W. HASKINS, Chagrin Falls, Ohio, October 29, 1934.

Dibble's Barley

DIBBLE'S SEED BARLEY

♦ DIBBLE'S ALPHA BARLEY ♦

Alpha Barley originated from a cross of the Manchuria, a six-row Barley, and the Champion of Vermont, a two-row sort. It is a medium tall, stiff-strawed, two-row variety maturing somewhat later than standard six-row types. These characteristics make it especially desirable for sowing with oats for growing a mixed grain crop. This Barley has been a consistently high-yielding variety at the Cornell Experiment Station for the past eighteen years. It is now the leading variety in New York State. The kernels are large, plump, and heavy, and the yield of the grain excellent. Alpha Barley has yielded 70 bushels per acre on our own farms.

Barley for Malting Purposes

Great care must be used in the handling, binning, and threshing of all Barley for malting purposes, and for this reason malting Barley commands a premium over the basic price of feed-type Barley.

Alpha Barley is not desirable for malting purposes.

The maltsters want a 6-rowed Barley, and for those farmers who wish to attempt the growing of malting Barley we recommend Dibble's Wisconsin No. 38 or Oderbrucker.

WISCONSIN NO. 38

A Six-Row Barley

This is a new, smooth-awned variety developed by the Wisconsin Agricultural Experiment Station. It is a little later in maturing than most of the six-row types and has a fairly stiff straw if harvested before it is fully ripe. It matures at about the same time as Alpha and is the highest yielding smooth-awned Barley yet tested at the Cornell Agricultural Experiment Station.

DIBBLE'S SOY BEANS

Soy Bean culture is steadily increasing in America. In less than 30 years the acreage has increased a hundredfold—from 50,000 acres in 1907 to more than 5,000,000 acres in 1935. There have been found more than 300 widely assorted uses for the Soy Bean.

Eastern farmers are using more Soy Beans because:

1. They may be grown like field beans to be threshed. The grain is, in this case, used as a high protein supplement in dairy feeds.
2. They may be grown with corn to increase the feeding value of the silage.
3. They may be used as an emergency hay crop. Soy Bean hay has a feeding value similar to Alfalfa.
4. They may be cut and fed as green roughage.
5. They may be used to plow under for green manure. Being a legume they are one of the best plants for soil-improvement.

From scores of varieties introduced from China, Korea, and Japan, only a few, on account of their earliness, are adapted to the climatic conditions of our territory in the northeast.

Varieties to Use for Grain or Seed

CAYUGA. A new, early variety, and the only high-yielding sort recommended for grain-production in New York State or in regions having a similar growing period. Planted in late May or early June, this variety is ready to harvest by the middle of September. Use 35 to 40 pounds of seed per acre when planted in rows, or 90 to 100 pounds when drilled solid. Yields of 30 to 40 bushels per acre were reported last year.

For Silage, Hay, or Soil-Improvement

MANCHU. A medium-early variety maturing in about 110 days. Large, upright, bushy vines, extremely productive. Our customers have convinced us that this is the best variety for silage, hay, or soil-improvement.

For silage use 15 pounds Soy Beans and 15 pounds Corn to the acre; for hay or green manure, use 6 to 8 pecks, if drilled solid, or 3 to 4 pecks in close rows. If used for hay, cut after pods form and before the leaves start to fall.

WILSON. Slightly later in maturing than Manchu and not quite as rank a grower. An excellent variety for hay. Rate of seeding same as Manchu.

NOTE. It is highly important that Soy Bean seed be inoculated. Use NOD-O-GEN to inoculate this seed.

ODERBRUCKER

An earlier maturing six-row Barley from Wisconsin, our best Barley state, and pronounced one of the best Barleys ever sent out by the Wisconsin Experiment Station.

Soy Beans

"Comin' through the corn"—thirty tons of ensilage to the acre on our own farms

CROW REPELLENTS

Protect Your Corn Plantings with
STANLEY'S CROW REPELLENT

These black-winged robbers won't stay long in a field protected by Stanley's Crow Repellent. Not poisonous, and does not affect the corn—but the crows leave. A 60-cent can treats a bushel of seed.

Crow-Tox Crow Repellent

Another preparation that will make crows take wing—not the corn. Applied to the seed it acts as a protector against smut and ground-rot. See special list for prices.

SEED DISINFECTANTS

New Improved Ceresan. A low-cost dust disinfectant for wheat, oats, and barley. One pound treats 32 bushels.

New Improved Semesan Jr. A dust disinfectant for seed corn. Two ounces treat a bushel of corn.

New Improved Semesan-Bel. A dip disinfectant for seed potatoes. One pound treats 60 to 80 bushels of potatoes.

For prices see *Special Price-List* in this Catalog

DIBBLE'S Northern-Grown SEED CORN FOR NORTHERN FARMERS

Every bag is tagged, showing our purity and germination tests

Each individual crop, ears hand-selected by expert Corn-growers, then shelled, cleaned, milled, and graded.

Every lot tested in our own laboratory for purity, moisture content, and germination, and sold subject to our famous money-back-if-you-want-it guarantee.

The utmost care is taken to furnish Seed Corn of the highest possible quality, Corn that is thoroughly dried naturally or dried artificially by the most up-to-date methods known, of high germination and of varieties that are adapted to the northern and eastern states.

Northern-grown Corn is the only kind to plant in the northern states. It is vigorous, hardy, acclimated, and productive. Southern-grown varieties look nice, germinate well, but *do not mature*.

Golden Millet.....	40 to 50	Late May to early June
Sweet Clover.....	15	March to August

DIBBLE'S EARLY YELLOW DENT CORN

Was introduced by us twenty-seven years ago, as the earliest large Yellow Dent in existence. During that time we have tried out, tested, and inspected fields of other Early Dents and, as a result, we still say to our customers that Dibble's Early Yellow Dent is the most desirable of the Early Dents for the eastern farmer.

A Dakota seed-house offers a Dent that ripens in 70 days, but the stalks are 4 to 5 feet high, and the ears are nubbins, 4 to 5 inches long. Minnesota, Wisconsin, Iowa, and Ohio firms offer Early Dents to mature in 75 to 80 days, but the stalks are 5 to 7 feet high, and the ears 5 to 7 inches long. We can procure stocks of these for you if you wish, but why bother with dwarf varieties of Corn when you can grow magnificent crops of Dibble's Early Yellow Dent on the same land?

We do not advise its growth at high altitudes, such as the hill lands of New York, for a husking crop, but we do recommend it as the best early Yellow Dent for ensilage now grown.

Dibble's Early Yellow Dent planted here in the Genesee Valley country, May 15 to June 1, is usually ready for the harvest by early September, but many of our customers report that it matures earlier with them. The foliage is very leafy and the stalks average 10 to 12 feet in height. One field of 12 acres on one of our own farms measured 14 feet on the level for the entire field. The ears, 8 to 10 inches in length, are closely set with bright yellow grains on a small cob, as shown in illustration. Hundreds of our customers, in a dozen different states, plant Dibble's Early Yellow Dent year after year.

Our seed is from carefully selected, hand-picked ears, thoroughly re-cleaned, of splendid germination, and we sell it subject to your test on our money-back-if-you-want-it guarantee.

DIBBLE'S SEED CORN GUARANTEE

We guarantee every bushel of our Seed Corn to be northern-grown and thoroughly re-cleaned. Our germination tests show 90 per cent or above, and we sell Seed Corn subject to your test.

You may keep our Seed Corn ten days, test it any way you wish, and if it does not "make good," return it immediately and we will refund your money, paying the freight both ways, or refill your order. We use reasonable care in packing and sending out our Seed Corn, but as so many circumstances may arise over which we have no control, we do not guarantee, nor will we be responsible for the crop grown from any of our seeds.

Good Words for Dibble's

Your Early Yellow Dent was very satisfactory. It gave us a very good crop of well-matured silage, although it was a poor Corn year locally. I think you will receive many orders from my neighbors.—Dr. E. W. FILES, Gorham, Maine.

The people around these parts said, last fall, they never saw such Corn as I raised from Early Yellow Dent and Mammoth Yellow Flint seed that you sent me last spring. From just 3 acres I filled 2 silos, one 10 x 30 feet, and the other 10 x 20 feet. Quite a number of my neighbors are planting the Early Yellow Dent Corn and are very much pleased with it.—JOHN WRIGHT, Merrimack, N. H., March 15, 1934.

DIBBLE'S IMPROVED EARLY LEAMING CORN

Just 110 years ago (1826) a variety of Yellow Dent Corn was introduced to American farmers and named for the originator, Mr. J. B. Leaming. Soon "Leaming Corn," through sheer merit, became the most popular of the Dent Corns. Dibble's Improved Leaming is at least ten days earlier than the common Leaming of commerce. We recommend it as the most popular variety for ensilage purposes for the Middle and New England States.

Our Improved Leaming matures here in western New York in from 100 to 110 days of good Corn weather; the stalks average from 10 to 15 feet in height, and we have put into our silos, many a time, 30 tons of ensilage per acre that would have husked 100 to 125 bushels of ears.

One of the professors of Cornell University recommends Leaming as one of the best varieties of ensilage Corn. We ourselves have proved this in field-culture on our own seed farms, and it is a source of pleasure to have Cornell University advocate the very doctrine we have been trying to impress on the farmers of this state for thirty years. Dibble's Improved Leaming is strictly high-grade, pedigree seed, from carefully selected, hand-picked ears, and sold to you subject to your own test. Keep it ten days and, if not right, return it and get your money back as per terms of our guarantee. You run absolutely no chance of using poor Seed Corn if you buy Dibble's Improved Early Leaming. We shall be glad to send you samples free; so test them to your entire satisfaction. For prices, see special Price-List.

DIBBLE'S MAMMOTH YELLOW FLINT CORN

Is the best Flint Corn in cultivation either for crop or silo. It is the largest-growing Flint variety, and one of the earliest, maturing here in the Genesee Valley in around 100 days. The stalks average 8 to 10 feet in height (under good cultivation sometimes 12 to 14 feet), from 1 to 3 feet taller than other Flint varieties we have grown alongside. The stalks leaf profusely nearly to the ground, and the stalks and leaves are sweet, making it the most desirable ensilage variety for those sections of our country known as "Flint Corn Land."

Dibble's Mammoth Yellow Flint is, without doubt, the most productive Flint Corn known. As a cropper for husking, it is unexcelled. The ears average 10 to 15 inches in length, and frequently there are two or three mammoth ears to a stalk.

Throughout New York, the higher sections of New Jersey and Pennsylvania, and all of New England, Dibble's Mammoth Yellow Flint is the best and the surest cropper. Every farmer should grow Corn and cut down on the feed-bills. A crib full of good, sound ear Corn will keep the stock fat and husky, and you do not have to plant all of your farm to fill a 1000-bushel crib, either.

Our stock seed consisted of several bushels, every ear of which was over 12 inches long, and many of them exceeded 15 inches.

I want to say to you in this small space that I raised a wonderful crop of Mammoth Yellow Flint last year and the year before from your Seed Corn. I cannot praise it enough at this time.—CLYDE PECKHAM, Pownal, Vt., April 4, 1935.

I raised 2 acres of your Mammoth Yellow Flint Corn last year that yielded about 200 bushels to the acre of ears, from 10 to 16 inches in length, and the drought retarded the growth.—FRANKLIN MCCORMICK, Boonville, N. Y., March 26, 1934.

DIBBLE'S CORNELL 11 CORN

Cornell 11 is a variety developed by ear-to-row selection from Pride of the North and differs from Pride of the North mainly in that it is about two weeks earlier in maturity while in stalk it is about 1 foot shorter. The ears are characteristically cylindrical in shape, 6 to 8 inches long, usually not well filled at tips and of 14 to 18 rows, with cob rather large. The kernels are medium broad and thick and rather shallow as compared with Corns of the Corn-belt such as Leaming or Reid's Yellow Dent. The color is yellow but some reddish ears appear. The selection was designed not for producing a "show" Corn but for high yield of grain and early maturity. During the past few seasons this variety has proved very popular with many of our customers. Cornell 11 is recommended by the New York State Department of Plant-breeding as one of the most desirable varieties for the hill sections where the seasons are short.

Have recommended your Lancaster Sure Crop to several who have sent for it. These 2 bushels are for neighbors who saw mine last year. Besides filling my silo I husked some very fine seed.—J. G. ABRAMS, Williamston, Mich., May 1, 1935.

DIBBLE'S LANCASTER COUNTY SURE CROP

A splendid Corn of Pennsylvania origin, and the leading variety grown in Lancaster County, the best and most productive agricultural county in the state.

Sure Crop is a hybrid developed from two well-known old varieties. It has long, rather large ears and small cob, is an extremely heavy yielder, medium as to time of ripening, and grows a wonderful mass of foliage, with stalks 10 to 18 feet high. Being extremely rich in protein makes it most desirable for ensilage. It is practically sure to ripen on good Corn-land anywhere in the East in the latitude of Pennsylvania where the parent seed-stock was grown. Our 1935 crop is averaging over 40 bushels per acre of re-cleaned, screened, and graded Corn, germinating nearly 100 per cent. Can you beat it?

DIBBLE'S GOLDEN GLOW

An extremely early, pure golden yellow Corn, most attractive in color and appearance. It is strictly a Wisconsin Corn developed by the Wisconsin Experiment Station. The ears are of medium size, around 8 inches in length, and in spite of its earliness it grows good stalks with heavy leaves.

We are offering only the "big type of Golden Glow" and the strain that has been bred to be "cold-resistant."

Our New York Department of Plant-breeding recommends Golden Glow for northern New York.

Dibble's Lancaster County
Sure Crop

Dibble's Golden Glow

I like to plant your seeds as I know they are the best that I have ever planted.—ERNEST HOGG, Grand Isle, Vt.

Your Seed Corn is always cheapest, and there is none better at any price.—RAY FAULDIN, Arcade, N. Y., March 14, 1934.

DIBBLE'S

IMPROVED EARLY SWEEPSTAKES

♦ ENSILAGE CORN ♦

Ten days earlier and much more desirable in every way than the old Sweepstakes Ensilage Corn—a variety grown chiefly in Central Pennsylvania near Williamsport. The New York State College of Agriculture used it some years ago in plot tests and found it gave a large green tonnage and matured early enough to qualify as an excellent silage variety. It ears heavily and matures earlier than most other varieties sold under the name of Sweepstakes.

Dibble's Improved Early Sweepstakes appears to be a hybrid between Lancaster County Sure Crop and a White Cap Yellow Dent. The plant is a vigorous grower, 10 to 15 feet on good soil, ears 8 to 12 inches in length, with 12 to 20 rows of kernels. Cob is usually large and rather well filled at the tip. The color of kernels varies from Red to White Cap Yellow Dent.

We have been selecting for the red-kernel type and have thereby cut down materially on the percentage of white-cap yellow ears. Some ears, however, have kernels with very light-colored caps and only a tinge of red on the sides of the kernels. Others are nearly red. It has been an exceptionally favorable fall for the maturing of this variety and we have some very choice high-germinating seed to offer.

Dibble's Improved Early Sweepstakes made a wonderful growth on our seed farms last year and the crop was thoroughly ripe right here in western New York four years in succession.

OUR SWEEPSTAKES IS EARLY

The Improved Early Sweepstakes was the best of all varieties grown on ours or adjoining farms.—FRED M. GIBBS, Ithaca, N. Y.

Last year I planted some of your W. B. Sweepstakes which I held over from 1933, also some I bought here (½ bus.), and your seed was so much superior I prefer yours. Stalks from your seed grew to average 12 to 14 feet, whereas the other averaged about 9 to 10.—RALPH S. BROWN, W. Townsend, Mass., June 3, 1935.

The Early Sweepstakes grew 12 feet high and matured in 100 days from planting.—JOHN E. FRANKO, Falls, Wyoming Co., Pa.

The Improved Early Sweepstakes grew 12 feet high, ripened in 110 days, and produced 23 tons of ensilage per acre.—MICHAEL DAILEY, Sheffield, Mass.

The Early Sweepstakes was the brightest Seed Corn we ever planted. Germination extra good and averaged better than other varieties.—J. HAMMOND & SON, Dryden, N. Y.

DIBBLE'S BIG RED DENT CORN

Is a Corn of great value and well worthy of trial. We found this Corn in northern Ohio several years ago, and in comparison with Improved Leaming on adjoining farms, it has larger and more vigorous stalks. It grew more and bigger foliage than the Leaming, with bigger ears and more of them, and ripened earlier. Experience on our farms has given the same results, and a number of the leading dairymen in our section, after seven years' experience, consider it the best ensilage Corn for western New York. There have been raised at least 100 acres of it in our town that would have husked 125 to 150 bushels of sound, dry Corn to the acre if it had not been put into the silos. A number of our customers who planted it in a small way last season had most satisfactory crops and will plant heavily of it this year.

Dibble's Big Red Dent grows tall and vigorous, with leafy stalks, and is a remarkable producer. The kernels when thoroughly dry are of a beautiful reddish tint, well set on a small, red cob. Recommended for trial in all sections where Improved Leaming gives good results.

DIBBLE'S

Mammoth White Dent Corn

Grows the tallest and is the most leafy of any of the big varieties of Ensilage Corn with which we are acquainted, and is the only big, rank-growing White Corn that is, in our opinion, adapted to the northern states.

Our seed stock of this variety is grown in latitude 41°, and during the past ten years it has thoroughly matured and ripened slightly farther north. Northern-grown Seed Corn is the kind for farmers in the northern states to plant.

Dibble's Mammoth White Dent is the largest, strongest-growing White Corn, whether Flint or Dent, that is adapted to the northern or central states. This variety is a very hardy, extremely rapid grower, and under favorable conditions, with first-class culture, will produce crops 14 to 20 feet in height.

There may be some other varieties of White Corn that will grow as big foliage as our Mammoth White in the North, but on our own farms, and under our own observation, there has been no other kind to compare with it.

Stalks 18 Feet High

The Corn grew uncommonly good—as high as 18 feet. I grew fifty loads from 2 acres of ground.—C. G. WEEKS, King Hill Stock Farm, Surprise, N. Y.

Filled 300-Ton Silo from 12½ Acres

The Mammoth White Ensilage Corn did fine. Corn in ear hardened by September 28. Stalks from 12 to 22 feet high, according to the conditions of soil. Filled a 300-ton silo from 12½ acres. Call it "King of Ensilage Corn."—R. B. ANDERSON, Guilford, Conn.

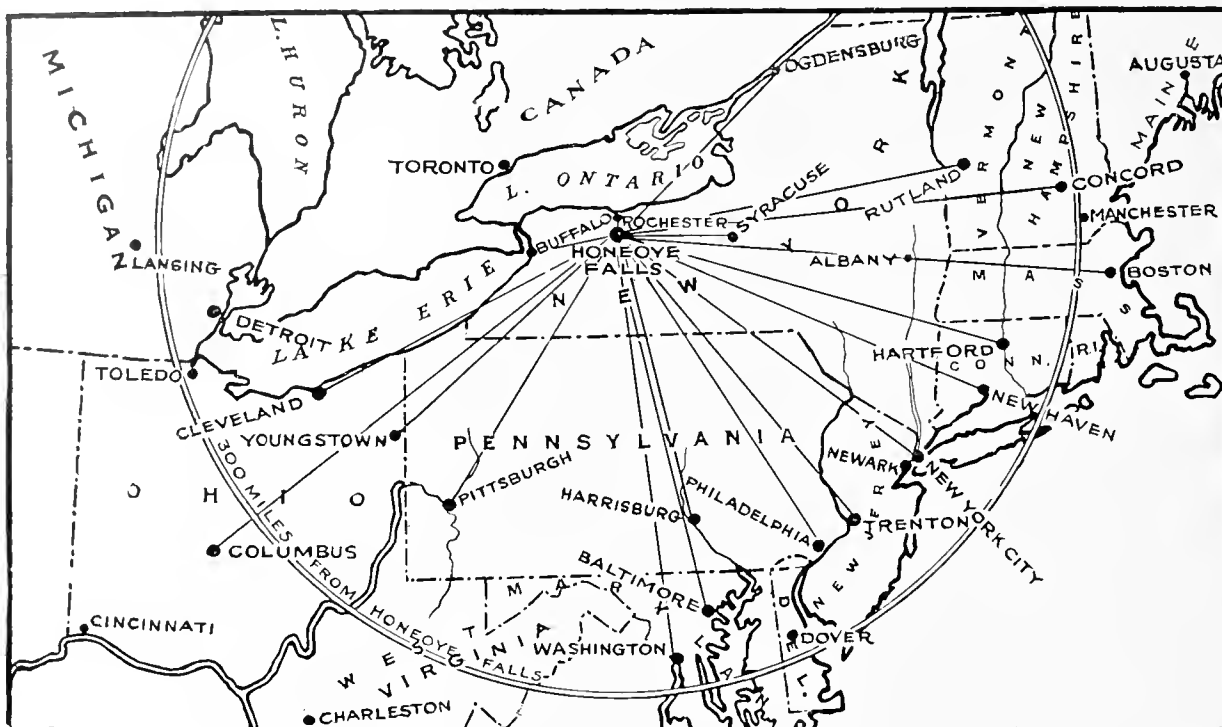

Now, then, you northern and eastern farmers desiring to grow bumper crops of big Corn with ears on it for your silo, plant Dibble's Mammoth White Dent instead of Southern Sheep-Tooth, Eureka, Red-Cob and the like, all Corns of southern origin, and you will be more than satisfied.

Dibble's Mammoth White Dent is sold to you subject to your own tests after you receive the Corn. Test it any way, and if it is not as good as we say it is, send it back and get your money back. Read the guarantee before ordering. Our Corn must please you, or you do not have to keep it.

I am enclosing a picture of a field of Mammoth White Dent Corn that was grown from your seed. This Corn grew 12 to 14 feet tall, as you can see in the picture, which was taken in 1933 by the Worcester County Extension Service. It was so good that the Extension Service is going to show it in their Better Crop Lectures.—MARIEL E. BOUTELLE, Leominster, Mass.

LOOK AT THE MAP

THIS is our territory, and we use all of the experience we have accumulated in over forty years in growing and selling Farm Seeds, to supplying only those varieties, and from the proper northern sources, that will give the best results on the farms of the Middle and New England States. You will note the 300-mile circle covers most of this section and parts of Ohio, the Virginias, and Maryland. Freight rates are low, and as this part of the country is covered by a network of railroads, service is rapid, and any seeds ordered from us by freight should reach you within a week from shipment at the latest, and if by express, in a day or two at the most.

We do not prepay freight, as we have found that a uniform freight-prepaid price works an injustice to the farmer within 100 miles of us, and favors the one around the extreme edge of the 300-mile circle, and we desire to be just and fair to all men. We will be glad, however, to make you prepaid prices upon request.

If we can save you money, we are entitled to your order. In comparing prices and quality, we are positive you will find you can save money in ordering your Farm Seeds from us, and on that basis may we not have your order?

We want large orders, of course, as our business is furnishing business farmers the highest grade seeds that will produce money-making crops. But no order is too small to get our most careful attention, as our experience has been, if once a farmer begins ordering his seeds of us, nine times out of ten, he will be a customer for life. Now, in your case, if you cannot send a large order, try a small one.

A bag of Timothy-Alsike Mixture, a bushel each of Clover and Timothy, a sack of Oats, and a couple of bushels of Seed Corn will give you a fair chance to try our Farm Seeds. If you have never grown Dibble's Russet Potatoes, include at least a sack in your order; we are sure you will thank us for the suggestion. Wherever Dibble's Russets are grown, they are not changed for any other variety.

Winter Wheat and Rye. On request we will send you a price-list on August 1, quoting seasonable seeds for August and September sowing. We will have available Honor, Forward, and Val-Prize Wheat, the best three varieties of Winter Wheat for eastern conditions.

The 20 bushels of Forward Seed Wheat you shipped me last fall was very nice and we had a very good stand.—J. N. BLOSE, Shelocta, Pa., January 5, 1935.

EDWARD F. DIBBLE SEEDGROWER

STATE

1. The first part of the document is a title page. It contains the title "THE HISTORY OF THE UNITED STATES OF AMERICA" and the author's name "BY JAMES M. SMITH".

2. The second part of the document is a table of contents. It lists the chapters and their corresponding page numbers.

3. The third part of the document is the first chapter, which is titled "THE DISCOVERY OF AMERICA". It describes the early exploration of the continent by Christopher Columbus.

4. The fourth part of the document is the second chapter, which is titled "THE SETTLEMENT OF AMERICA". It describes the early settlement of the continent by European colonists.

5. The fifth part of the document is the third chapter, which is titled "THE REVOLUTIONARY WAR". It describes the war between the American colonies and Great Britain.

6. The sixth part of the document is the fourth chapter, which is titled "THE CONSTITUTION". It describes the formation of the United States Constitution.

7. The seventh part of the document is the fifth chapter, which is titled "THE CIVIL WAR". It describes the war between the Northern and Southern states.

8. The eighth part of the document is the sixth chapter, which is titled "THE RECONSTRUCTION". It describes the period of rebuilding the Southern states after the Civil War.

9. The ninth part of the document is the seventh chapter, which is titled "THE PRESENT". It describes the current state of the United States.

10. The tenth part of the document is the eighth chapter, which is titled "THE FUTURE". It describes the future of the United States.

10 REASONS FOR PLANTING DIBBLE'S FARM SEEDS

- 1 Dibble's Seeds are better Seeds for less money.
- 2 Members of the Dibble Company are practical farmers, operating their own farms, and they know from experience what kind of seeds are essential for a successful crop.
- 3 There are over 1000 acres in the Dibble Seed Farms, comprising some of the choicest farming lands in the far-famed Genesee Valley, and they ship from their Farms to yours.
- 4 The Warehouses, Elevator and Storage Houses, 400 feet in length, with a capacity of around 100,000 bushels, located on private switches, are owned and paid for. Our overhead charges are low and we pass this saving on to you.
- 5 The Dibble Farm Seed Business is established in the little village of Honeoye Falls, right in the heart of the best seed-growing district of the Empire State. This means, as nearly as possible, eliminating middlemen, cutting out heavy freight charges, no drayage or cartage expense, and saving you money every time.
- 6 Dibble's Farm Seeds are tested in our own laboratory by a graduate seed analyst who is a member of our firm, and every bag of Alfalfa, Clover, Timothy, Corn, Oats, Barley, etc., is tagged, showing our Purity and Germination Test, also the month in which the test was made. We were pioneers in giving this service to our customers, long before the state seed laws made it compulsory. Look for Purity and Germination Test on all seeds you buy.
- 7 In buying Dibble's Farm Seeds you are assured of getting the highest grade obtainable. The New York Seed Law is essentially a labeling law, in that it does not forbid the sale of any kind of seed but does require a tag or label upon each lot or parcel of seed, showing certain information, which is essential to the buyer. Dibble handles just one quality, the BEST that money will buy.
- 8 Dibble's Farm Seeds are northern-grown, full of vitality, hardy and vigorous, and adapted to the northern and eastern states. We do not handle cheap southern or foreign seeds that are not adapted to our climate. Southern or foreign-grown Alfalfa seed is offered at several dollars less per bushel than we pay for our Northern D. B. Brand, but it will not stand our northern winters. Southern Seed Corn looks nice, grows well, but will not produce ears in our northern states. Hundreds of our customers have written us that Dibble's Northern-grown Seed Potatoes have doubled their crops.
- 9 Dibble's prices are usually lower than the same quality of seed can be purchased for elsewhere, as we have small overhead expense, own our own Seed Farms, Warehouses, etc., have no rent to pay, and are satisfied with a just and reasonable profit.
- 10 In addition to surrounding our customers with every possible protection against poor seeds by buying only the highest grade obtainable and testing every lot in our own Seed Laboratory, we sell Dibble's Farm Seeds on a ten-days' money-back-if-you-want-it guarantee, subject to any test any customer may make or wish to have made within ten days after the seeds come into his possession.

We use all of our experience, intelligence, and energy
doing one thing and doing that one thing well

CASH PAID FOR PRIZE PICTURES

On this page in our 1937 Catalog we want to show pictures of crops grown from Dibble's Seeds by our customers.

\$5 Cash Will Be Paid
for Each Picture
Chosen by the Judges

Three competent judges will select the pictures, which will be printed on this page in our 1937 Catalog. For all pictures selected we will pay \$5 each.

FOLLOW THESE RULES

1. The pictures must be of a crop grown by a customer in 1936 from Dibble's Seeds purchased in 1936.
2. Submit as many pictures as you wish. Pictures may be any size.
3. No pictures will be accepted after October 1, 1936.
4. All persons sending pictures must consent to their use for advertising purposes, whether such picture wins a prize or not.
5. No pictures will be returned.

**GET OUT YOUR CAMERA—
WIN SOME EXTRA MONEY!**

WE INVITE you to compare our low prices and quality with those of any other reputable American seed-house, and if you will only do this we feel sure you will send us your order. Many seedsmen, for reasons best known to themselves, do not give any guaranty, either express or implied, as to origin, purity, or germination in their Catalog or Price-List. In ordering from us, you know in advance what you are buying and you get what you buy.
